Build Fast API backend

Slide 1 – FastAPI Backend

Build FastAPI Backend

Legal Ease: AI-Powered Legal Document Generator

- FastAPI is used to build the backend API.
- It connects the frontend with the AI document-generation system.
- The backend receives user details and processes them.
- It sends the generated legal document back to the user.

Slide 2 – `/generate` Endpoint

Generate API Endpoint

- Endpoint: **`POST /generate`**
- Used to generate a legal document.
- Accepts user-provided document details.
- Processes the request through the backend.
- Returns the generated legal text as a response.

Slide 3 – Request Parameters

Input Data

The `/generate` endpoint accepts:

- **document_type** – Type of legal document
- **parties** – Names/details of involved parties
- **terms** – Important conditions and agreements
- **dates** – Relevant dates of the document

Slide 4 – Request Processing

Backend Processing

1. Receive POST request.
2. Validate the input data.
3. Prepare the information for AI processing.
4. Create a suitable prompt.
5. Send the prompt to Gemini.
6. Receive the generated legal text.

Slide 5 – Gemini Integration

AI-Powered Generation

- Gemini is used for generating the document content.
- User inputs are converted into an appropriate prompt.
- Gemini processes the requirements.
- Generated text is received by the FastAPI backend.
- The backend returns the result to the frontend.

Slide 6 – API Response & Conclusion

Generated Output

- FastAPI returns the generated text to the application.
- The user can review the generated document.
- The document can be formatted and downloaded.
- Input validation and secure API handling improve reliability.
