Deployment

Slide 1 — Title

Deployment

- Introduction to software deployment
- Name / Class / Date

Slide 2 — What is Deployment?

- Deployment is the process of making a software application available for users.
- It involves moving software from development to a live environment.
- It can include installation, configuration, testing, and release.

Slide 3 — Deployment Process

1. Development
2. Build and package
3. Testing
4. Deployment to staging
5. Production release
6. Monitoring and maintenance

Slide 4 — Types of Deployment

- **Manual Deployment** – performed by developers/admins
- **Automated Deployment** – uses deployment tools and scripts
- **Cloud Deployment** – hosted on cloud platforms
- **On-premises Deployment** – installed on organization-owned infrastructure

Slide 5 — Deployment Tools & Technologies

- GitHub / GitLab
- Docker
- Kubernetes
- Jenkins
- AWS / Azure / Google Cloud
- CI/CD pipelines

Slide 6 — Benefits & Conclusion

Benefits:

- Faster software releases
- Reduced deployment errors
- Better scalability
- Easy monitoring and rollback
