Frontend with Streamlit

Slide 1 – Frontend with Streamlit

Legal Ease: AI-Powered Legal Document Generator

- Streamlit is used to build the frontend.
- Provides a simple and interactive web interface.
- Allows users to enter legal document details.
- Connects the frontend with the FastAPI backend.
- Displays the generated document to the user.

Slide 2 – Streamlit Interface

User Interface Design

- Add project title and description.
- Create input fields for user information.
- Provide document type selection.
- Add buttons for document generation.
- Display results in a clear format.

Slide 3 – User Input

Collect Document Details

Users can enter:

- **Document Type** – Agreement, Contract, etc.
- **Parties** – Names of involved parties.
- **Terms** – Conditions and requirements.
- **Dates** – Important dates related to the document.

Slide 4 – Backend Connection

Connect Streamlit with FastAPI

- Streamlit sends user input to the FastAPI backend.
- Uses the `/generate` API endpoint.
- Sends a POST request containing document details.
- FastAPI processes the request and calls Gemini.
- The response is returned to Streamlit.

Flow:

```
Streamlit → FastAPI → Gemini → FastAPI → Streamlit
```

Slide 5 – Display Generated Document

Output & User Experience

- Receive generated text from the backend.
- Display the document inside the Streamlit interface.
- Allow users to review the generated content.
- Provide options to copy or download the document.
- Keep the interface simple and user-friendly.

Slide 6 – Complete Frontend Workflow

Streamlit Application Workflow

1. Open the Legal Ease application.
2. Select the document type.
3. Enter parties, terms, and dates.
4. Click **Generate Document**.
5. Streamlit sends the request to FastAPI.
6. Display the AI-generated legal document.
