Implement core generation features

Slide 1 – Implement Core Generation Features

Legal Ease: AI-Powered Legal Document Generator

- Develop the main document-generation features.
- Allow users to create legal documents easily.
- Use AI to generate documents based on user requirements.
- Provide a simple and user-friendly interface

Slide 2 – User Input & Requirements

Collect User Information

- Select the required legal document type.
- Enter necessary personal and legal details.
- Collect information through structured forms.
- Validate the entered information.
- Ensure all required fields are completed.

Slide 3 – AI-Based Document Generation

Generate Legal Documents

- Process the user's input using AI.
- Identify the required document structure.
- Generate relevant legal content.
- Create a properly formatted document.
- Reduce manual document preparation.

Slide 4 – Document Templates

Template-Based Generation

- Provide predefined legal document templates.
- Support different types of legal documents.
- Insert user information into the selected template.

- Maintain consistent formatting.
- Allow users to review the generated document

Slide 5 – Download & Management

Document Output Features

- Preview the generated document.
- Edit information when required.
- Download the document in PDF format.
- Save generated documents for future use.
- Provide easy access to previous documents.

Slide 6 – Testing & Final Implementation

Testing and Implementation

- Test different document-generation scenarios.
- Verify accuracy of user inputs.
- Check document formatting and completeness.
- Fix errors and improve generation quality.
- Ensure secure handling of user data.
